

## **CoPilot® Live™ launches Turn by Turn navigation for Android phones**

*The premium satellite navigation software is now available through the Android Market*

**London, UK, 29<sup>th</sup> June 2009** – ALK Technologies Inc, the leading developer of navigation and transportation software, today announced that its highly acclaimed CoPilot® Live™ satellite navigation system is now available for Android-based mobile phones. It can be purchased and downloaded immediately from Android Market for devices such as HTC Magic, T-Mobile G1 and the new HTC Hero.

CoPilot Live brings the very latest developments in turn-by-turn GPS navigation technology and real-time travel information to the Android platform. Users can benefit from detailed voice-guided turn instructions and cutting-edge 3D mapping, helping them to find their way wherever they go.

In common with the Windows Mobile based and Symbian product, CoPilot's premium quality digital street maps are stored on the phone, rather than relying on mobile Internet connectivity for per-trip data. Additional map regions can also be downloaded directly to the device.

A range of CoPilot 'Live' services, delivered via the phone's mobile Internet connection, are designed to make journeys more predictable, and include real-time traffic alerts, 5-day weather forecast information and a new location sharing service called CoPilot® LiveLink™.

Michael Kornhauser, Vice President and Managing Director, ALK Technologies' CoPilot division said "The release of CoPilot Live for Android and its availability for download via Android Market is a major milestone in our quest to provide full-featured navigation to the largest possible number of smartphone users. We are delighted to extend CoPilot to Android and, in doing so, help more people find their way easily in-car or on foot."

CoPilot Live brings the latest navigation innovations to Android, including:

- Enhanced GPS navigation guidance with upgrade options for lane indicator display at junctions, 'reality' sign post information, speed limit indicator and tunnel guidance
- Flickable scrolling menus and maps supports touch screen gesture recognition
- Clear turn-by-turn voice directions with a choice of voices
- Widescreen portrait or landscape mode
- CoPilot® LiveLink™ location sharing allows you to view the location of your CoPilot friends on-screen and share your location with them
- Phone integration, allowing direct dialling to POIs, location sending via text and photo navigation
- Safety camera alerts with free database updates

The full version of CoPilot Live is available to download today from the Android Market for £25.99 for UK and Ireland maps and £59.99 for all Europe.
